Ideation Phase
Brainstorm & Idea Prioritization Template

Date	04/09/2026
Team ID	6ab4a4a60fc666a751b434a8
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Project problem statement	Brainstorming focus
The school IT helpdesk receives multiple incident requests daily (Wi-Fi disconnects, projector failures, password lockouts, slow computers). Currently, IT staff manually review each request, assign Category/Subcategory, and send manual updates, which is time-consuming, error-prone, and inefficient.	Explore a no-code, automated approach using ServiceNow Flow Designer, custom table schema, dependent choice configuration, and automated caller notifications to eliminate manual triage bottlenecks.

Step-2: Brainstorm, Idea Listing and Grouping

Idea Group	Brainstormed idea from the project
Update Set Setup	Create a dedicated Local Update Set (Project Update Set) to capture all table modifications, dictionary rules, and flows for deployment.
Custom Table	Create a custom table Incident WorkFlow (u_incident_workflow) with auto-numbering enabled (INC500) to store tickets in a standardized format.
Field Configuration	Create required fields (Number, Caller, Short Description, Description, State, Assigned Group, Assigned to, Category, Subcategory) with appropriate reference and choice types.
Dependent Choice Logic	Configure dictionary dependency on Subcategory so choices adapt dynamically based on Category (Wi-Fi $\rightarrow$ Network, Projector $\rightarrow$ Hardware, Password $\rightarrow$ Access, Slow Computer $\rightarrow$ Performance).
Flow Trigger Configuration	Configure Flow Designer trigger on Incident Workflow table when a record is Created where Category is empty.
Keyword Parsing Logic	Implement conditional Flow Logic (If / Else If) evaluating Short Description keywords (Wi-Fi/Network, Projector, Forgot password, Slow computer).
Automated Field Update	Use Flow Designer Update Record action to automatically populate Category and Subcategory without technician involvement.
Automated Notification	Add Flow Designer Send Email action using data pills (Caller $\rightarrow$ Email) to send an instant submission acknowledgment to the caller.
Validation & Testing	Validate automatic field updates and confirm outgoing SMTP email logs via System Logs $\rightarrow$ Emails using test scenarios.
Deployment Packaging	Complete the Update Set and export it as an XML file for deployment across instances.

Step-3: Idea Prioritization

Priority	Idea	Importance	Feasibility	Reason based on project
1	Flow Designer Keyword Parsing & Record Update	High	High	Core automation mechanism that eliminates manual ticket triage and classifies incidents instantly upon record creation.
2	Dependent Choice Configuration	High	High	Enforces data integrity at the dictionary level so subcategories dynamically map to valid parent categories.
3	Automated Email Notification Action	High	High	Provides instant communication and reassurance to callers with zero manual effort from technicians.

4	Custom Table Creation with Auto-Numbering	High	High	Establishes a clean, dedicated database schema (INCxxxxx) for ticket tracking without modifying core base tables.
5	Flow Trigger on Empty Category	High	High	Ensures the flow runs only on new unclassified records, preventing duplicate execution and infinite loops.
6	System Log Email Validation & Testing	Medium	High	Verifies that automation triggers execute correctly and emails reach the send-ready SMTP queue before production handover.
7		Medium	High	Enables simple migration and backup of all custom metadata and flow configurations.
