Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	04/09/2026
Team ID	6ab4a4a60fc666a751b434a8
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Intake Form	○ Mandatory Caller Name and Short Description input ○ Auto-generated incident number (INC005xx) ○ Initial submission with empty Category field
FR-2	Custom Table & Schema	○ Custom table creation (u_incident_workflow) ○ Required schema setup (Caller, Category, Subcategory, Short Description) ○ Data type and field properties configuration
FR-3	Dependent Choice Configuration	○ Dictionary-level dependency linking Subcategory to Category ○ Dynamic UI filtering based on parent selection ○ Choice mappings (Network ➔ Wi-Fi, Hardware ➔ Projector, etc.)
FR-4	Flow Keyword Logic	○ Trigger on Record Created when Category is empty ○ Conditional branching (If / Else If) evaluating Short Description ○ Keyword recognition (Wi-Fi, Projector, Forgot password, Slow computer)
FR-5	Automated Record Update	○ Automated **Update Record** action in Flow Designer ○ System auto-populates Category and Subcategory ○ Zero manual classification by IT staff
FR-6	Caller Email Notification	○ Automated **Send Email** action via dynamic data pills (Caller ➔ Email) ○ Instant ticket creation acknowledgment message ○ Outgoing SMTP logging in System Logs ➔ Emails
FR-7	Deployment & Packaging	○ Local Update Set tracking (Project Update Set) ○ State transition from *In progress* to *Complete* ○ XML export for cross-instance migration

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Friction-free intake requiring zero technical categorization knowledge from end users. Dynamic dropdown dependencies are intuitive and reactive.
NFR-2	**Security**	Role-Based Access Control (RBAC) restricts flow and table modifications to ServiceNow administrators. Caller data is accessed securely via data pills.
NFR-3	**Reliability**	Deterministic keyword matching ensures consistent category assignment and dependable email dispatch tracked in sys_email.
NFR-4	**Performance**	Flow execution and record updates complete within ≤ 2 seconds of ticket creation with minimal platform overhead.
NFR-5	**Availability**	Operates 24/7 on ServiceNow cloud infrastructure with 99.9% availability, ingesting tickets outside business hours.
NFR-6	**Scalability**	Easily extensible to additional keyword conditions and department categories using no-code Flow Designer logic.
