Project Design Phase
Problem – Solution Fit Template

Date	04/09/2026
Team ID	6ab4a4a60fc666a751b434a8
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The campus IT helpdesk experiences significant operational delays and ticket backlogs due to a completely manual incident triage process. When students, faculty, and administrative staff encounter critical technical failures—such as Wi-Fi outages, non-functional classroom projectors, or account lockouts—they frequently submit requests with minimal descriptions and bypass complex categorization fields. Because incoming tickets lack accurate category and subcategory tags, service desk technicians must manually review, classify, and reassign each record, creating prolonged turnaround times, classroom disruptions, and communication gaps for the end user.

Purpose:

- **Fit User Needs:** Lets users submit minimal details while the system handles triage automatically.
- **Increase Adoption:** Uses standard portal forms so users need not learn complex IT categories.
- **Clear Communication:** Dispatches instant automated confirmation emails upon ticket submission.
- **Build Trust:** Reduces classroom downtime by quickly routing urgent issues directly to the right technician.
- **Improve Workflow:** Replaces manual service desk dispatch delays with automated keyword parsing in Flow Designer.
